Hyperbaric Recompression Chamber

The Cal Dive Hyperbaric Recompression Chamber is used in support of onshore and nearshore Air and Nitrox diving operations in remote locations.

Housed in an insulated and climate controlled 20ft ISO container, this system is portable and able to be mobilised at short notice.

An LP and HP compressor, and HP Air & Oxygen quads travel with the chamber. All equipment is maintained to IMCA guidelines and Australian AS2299.1 diving standards.
