

## SLS Mark IV

The Secondary Life Support (SLS) System is an emergency breathing apparatus intended for use by professional saturation divers, operating from a diving bell. The system is intended for use in the event of a fundamental failure of a diver's primary life support system.

The System operates on a semi-closed circuit principle with complete independence from the diver's primary breathing system.

The SLS provides a greater endurance than a standard twin bail-out set which is more commonly used in the industry.

Depth	SLS	Bail-out
50msw	30 mins	17.5mins
100msw	30 mins	9.5mins
150msw	28 mins	6.6mins
200msw	22mins	5 mins
250msw	19.5mins	4.0mins
300msw	17.5mins	3.4mins
